

Another EISA favorite is the Philips MCi900, which won the award for Best European Compact system. The Streamium Wi-Fi unit comes with SoundSphere speakers, and it's a clever little unit that will play DVD and DivX movie files, FLAC and WAV music files. You can also stream music direct from the PC thanks to the UPnP capability. An Ethernet or Wi-Fi connection also allows you to have access to Internet audio.

The Lenco SB-100 is a revolutionary new 3D sound system developed in cooperation with the Swiss company Sonic Emotion. It offers a natural 3D sound experience throughout the entire room, rather than producing a sweet spot like many current two-channel and 5.1-channel systems. "The technology is based on wavefield synthesis, a spatial audio rendering technology that creates virtual acoustic environments," says Lenco President and CEO, Nico Bravers. Every kind of input signal, including good old stereo, is reproduced in 3D, and as a result the

sound seems to come from all around. "95% of all TV sound is still in stereo, the SB-100 converts it all into 3D," Bravers said. "This means that the entire family can enjoy 3D sound from a single device. Whether it's sports, live concerts, the sound from game consoles or an iPod/iPhone connected to the TV set, the SB-100 offers a completely different experience."

Sennheiser has just launched eight new sets of headphones for the iPhone, the iPad and other Apple products. These are headset versions of headphones from the Portable Entertainment series that combine top-quality sound with a seriously useful hands-free system. We love the fact that the microphone and control unit are integrated into the cable and allow the Apple product to be controlled at the push of a button or by voice commands.
